# Code or Low-Code Navigating the test automation options

Maaret Pyhäjärvi September 2024

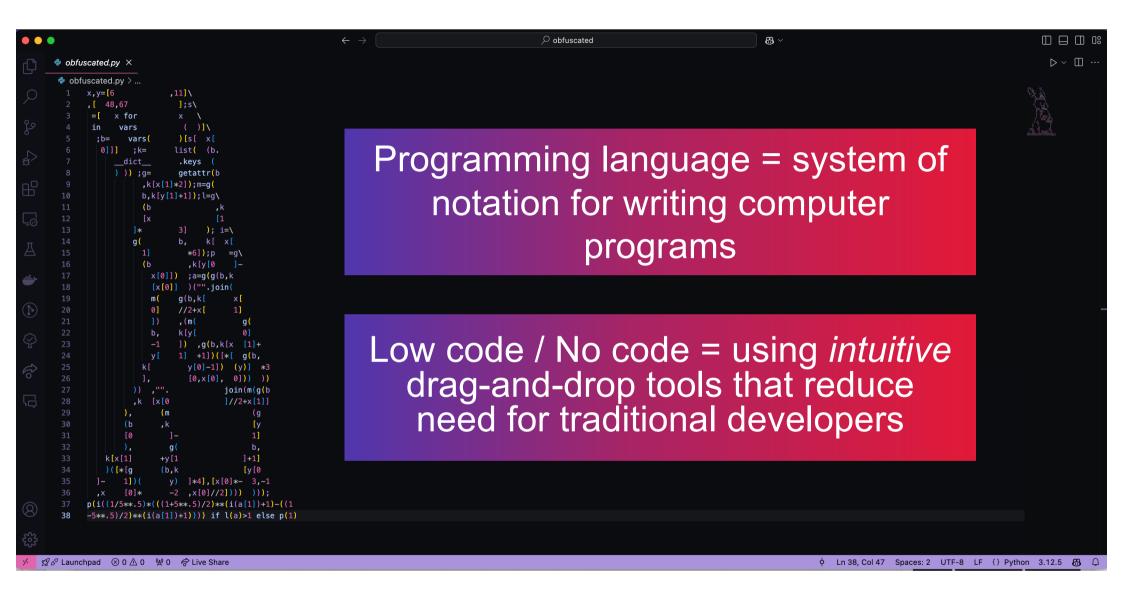

**CGI** 

# Hyperautomation – automating everything that can be automated

Collecting **key points** from years with projects of various states of test automation.

# Agenda for learning

Minimal knowledge for useful contributions
Learning in layers

Writing and reading Reading on failures

# Differences in learning

Code and low code

# Polyglot and polytool is a lot of work

# Hard to choose

FOSS | Commercial

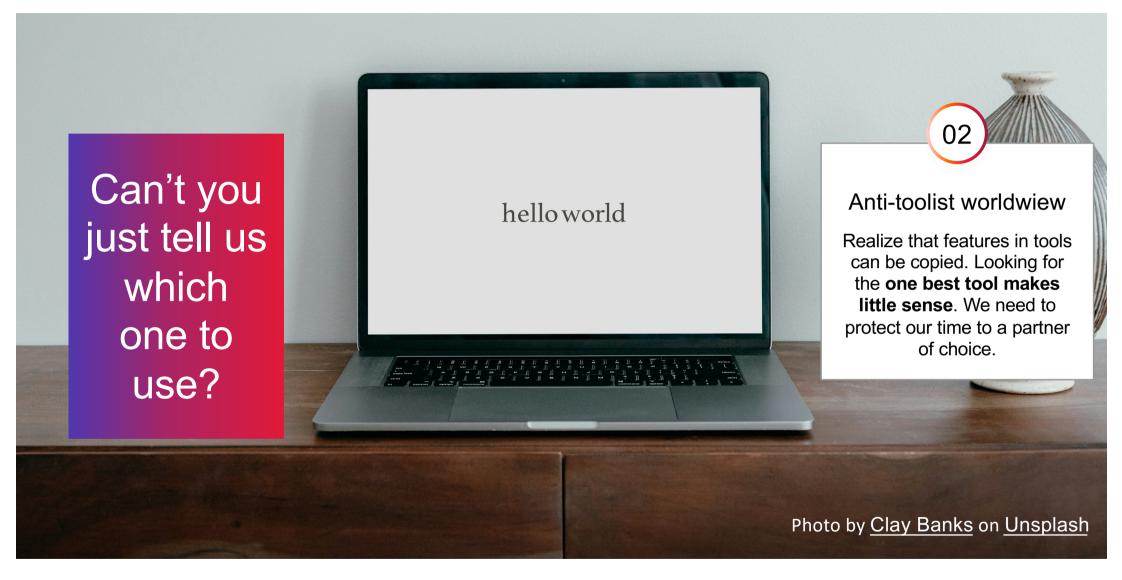

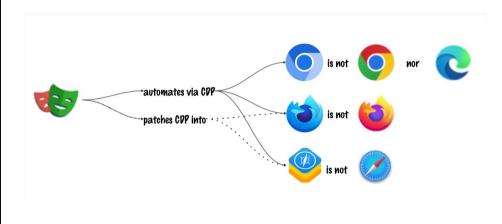

**Pifferent scopes** 

# With code

- maaretp@FI-HQ6Q36CQ7C hello\_world % python3 -m venv .venv
- maaretp@FI-HQ6Q36CQ7C hello\_world % source .venv/bin/activate
- (.venv) maaretp@FI-HQ6Q36CQ7C hello\_world % pip install -r requirements.txt
- o (.venv) maaretp@FI-HQ6Q36CQ7C hello\_world % playwright install
- (.venv) maaretp@FI-HQ6Q36CQ7C hello\_world % rfbrowser init

```

```
MINI > input > E test.feature

1    Feature: Eprime text analysis

2    As a user,

3    I want to verify my text for violations of eprime,

4    So I learn to write proper English

5    Scenario: Eprime analysis

6    Given the eprime page (https://maaretp.com/app/) is displayed

8    When user analyses sentence hello world

9    Then user learns sentence has 0 be-verbs, 0 possible be-verbs and total 2 words
```

Test Report : test.feature\_result.xml

Eprime text analysis

Eprime analysis

# Minimal knowledge for useful contribution

**Learning in layers** 

# For test automation, you choose a language

# **Tradeoffs**

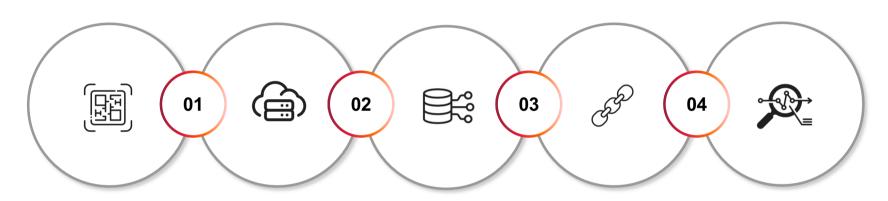

- Visual / Robot Framework / Gherkin / TypeScript / Python / Java / C# / ...
- Enable ownership over time when people change positions
- Granularity: feedback to where things got broken
- Reuse and integrations

Usual choice: automation in the language of the implementation.

```
test_basic.py X

    login.py
test_basic.py >  TestBasic >  test_navigating
      from playwright.sync_api import expect
      from time import sleep
      from dynamics page nav import DynamicsPageNav
      from login import Login
      class TestBasic:
             def test_navigating(self, page_to_url):
              Login(page_to_url).login_as_maaret()
              assert DynamicsPageNav(page_to_url) .get_app_name() == "Finance and Operations"
              workspaces = {"AOT browser",
                             "Customer payments",
                             "Ledger budgets and forecasts",
                             "Reservation management",
                             "Data management",
                             "Resource lifecycle management",
                             "Benefits",

               for workspace in workspaces:
                   expect(page_to_url.locator(f'text="{workspace}"')).to_be_visible()
              page_to_url.locator('text="Maintenance request management"').click()
```

# It's not just the language / tools

## **Tools**

Language +
Libraries.
CI/CD pipeline.
Test warehouse of results.

### **Environments**

Conceptual home for where tests run, with needs different for automation.

## **Test Data**

Business systems, business data. Varying degrees of logic impact and complexity.

# Long flow knowledge

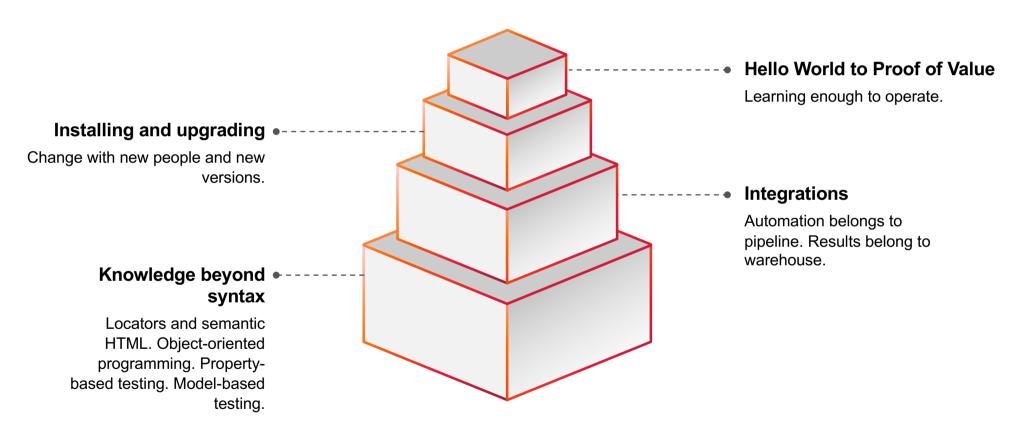

Multiple business expert to test real end to end flow.

# Analyze and enhance tests

It's a system you react to. Fix and adjust. Enhance with functionality.

17

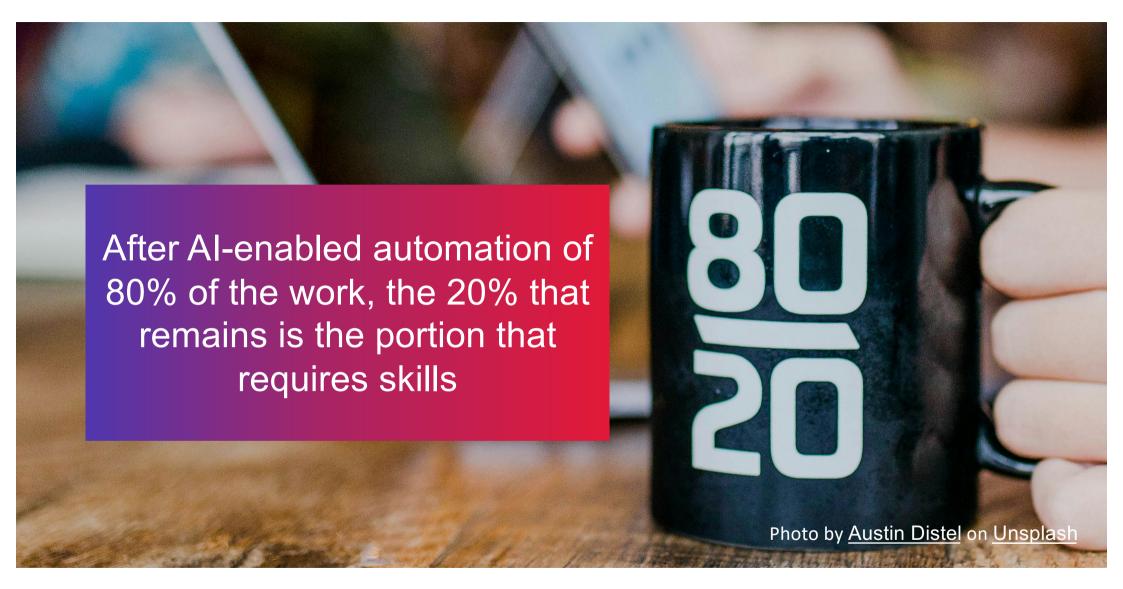

# Learning in Layers

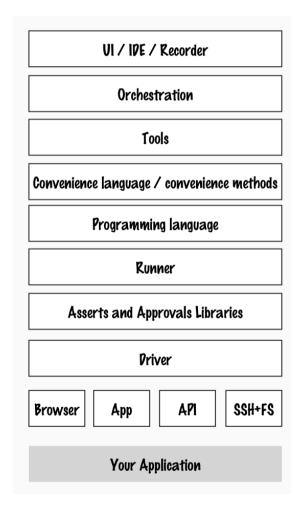

# Writing and reading

Reading on failures

# Looking inside the box

...or building up the box so that we know what the box contains?

# Key insights

Whole team ownership

Incremental strategy

Design for automation

Sharing tests with developers is essential.

One reliable test already running is better than plans.

Decomposing feedback for automation.

"The 10 years of success turned into failure within a month after the creator left"

"The plan for what to automate was obsolete after automating the first scenario"

"We have 5000 tests and half of them are failing. Can you recommend Al that fixes them?"

# Test automation gives us more than regression

# **Specification**

Examples shared **before implementation** act as specification.

### Feedback

We know **when it works** as we're implementing the progress.

# Regression

We safeguard our past intent over lifetime of system ownership.

# Granularity

We **know when and what** changed without extensive analysis.

# A Paris

# **Documenting**

Capture examples whenever we discuss them.

# Extending reach

Time. Environments. Data.

## Alerting to attend

Changes, both intended and unintended.

## Guiding to detail

Drives attention to details humans do repair for.

# Insights you can act on

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world.

We are insights-driven and outcomes-based to help accelerate returns on your investments. Across hundreds of locations worldwide, we provide comprehensive, scalable and sustainable IT and business consulting services that are informed globally and delivered locally.
